For:

MICROWAVE GENERATOR AND

Dated:

June 3, 2004

METHOD OF RADIATING

MICROWAVE ENERGY

Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

INFORMATION DISCLOSURE STATEMENT

Sir:

In compliance with the provisions of C.F.R. 37 §§1.97 and 1.98, requiring the applicants to provide the United States Patent & Trademark Office with any prior art of which they are cognizant, applicants herewith enclose eight (8) publications, of which seven (7) publications were cited by the Examiner during the prosecution of the corresponding German application, the latter of which is considered to contain allowable claims.

CERTIFICATE OF MAILING UNDER 37 C.F.R. §1.8(a)

I hereby certify that this correspondence is being deposited with the United States Postal Service as first class mail in an envelope addressed to: Commissioner For Patents, P.O. Box 1450, Alexandria, VA 22313-1450 on June 3, 2004.

Dated: June 3, 2004

Leopold Presser

With respect to the publications, these are generally technological background material which would not be in any manner applicable to the claims as currently pending herein.

With regard to the two publications which the Examiner in Germany considers to be the closest art, applicants own U.S. printed Publication No. 2003/00760448A1 is not at all applicable to the present pending claims. Similarly, with regard to U.S. Patent 3,484,619, this also would not be applicable to the currently pending claims. In contrast with the present invention, (repetitive excitation of a resonator in the form of the cup 16 through successive discharging capacitors 13 which are to be sequentially charged up) the U.S. Patent 3,484,619 relates expressly to a system without the utilization of a resonator (Col. 3, line 19), and above all, without any capacitors which are to be charged up (Col. 3, lines 31-38). Thus, in the system pursuant to U.S. 3,484,619 it relates to a coaxial wave train with the particularity that the internal conductor thereof is interrupted a plurality of times. Consequently, capacitive charging sequences as explained are thereby avoided. As a result, this U.S. Patent 3,484,619 cannot place in question the patentability of the claims of the present application, and none of the references, whether considered singly or in combination, are deemed to be applicable or pertinent to the claims as presently on file.

Accordingly, the early and favorable examination of the application on the merits is earnestly solicited.

Furthermore, inasmuch as the present Information Disclosure Statement is being filed within three months of the filing of this application, no statement or fees are required to be submitted by the applicants.

Respectfully submitted

Leopold Presser
